

Find the problems hiding between your systems.

A focused, read-only assessment that shows where revenue, cash, time and reliable information are being lost — before you invest in a larger automation initiative. Free 30-day introductory period; the findings are yours either way.

WHAT YOU RECEIVE

- Unified operating view — one current picture across the systems tied to the problem
- Issue and opportunity heat map — gaps, risks, leakage and workload, ranked by impact
- Estimated business impact — each issue sized in your own volumes and rates
- Ranked action recommendations — what to fix first, by value against effort
- AI agent deployment candidates — which findings an agent should recommend, prepare, execute or escalate
- Approval and escalation plan
- Executive readout — walked through live

HOW IT RUNS

- Kickoff call, 45 min — confirm the one problem, name the owner, agree the systems
- Connect within five days — read-only access to 2–3 systems; every connection live-tested on save
- Observation window — the platform reads history and current state; data-quality problems are a finding, not a blocker
- Checkpoint, 30 min — first observations back, to correct our interpretation early
- Findings delivered — ranked list of what to address first and what a agent would do about it

WHAT WE NEED FROM YOU

- Read-only access (API key or OAuth) to 2–3 systems
- About two hours of your time across the first five days
- One owner, and one person who can authorise the connections
- Nothing installed, nothing hosted, no migration

DESIGNED TO BE A SAFE FIRST STEP

Read-only first — Luminorix observes before it changes anything

Limited scope — one problem, a small set of systems

Human control — you set permissions, approval gates and escalation

No rip-and-replace — your systems stay in place

Isolated workspace, encrypted credentials
